

Hello Guest

My name is ORON Cohen, I'm a Full-Stack development student.

This is my final project that summarize React-hooks, Express-js, MySQL, Jwt authentication and etc.

This is a web for tagging vacations by the users.

There are 3 different modes (Admin, Registered user, Guest) you need to switch modes in order to watch all modes options.

You can register as **new user** or use one of the users in the table, note that user can see only his favorites vacations.

Mode	Add Vacation	Update Vacation	Delete Vacation	Mark as Favorite	User name	password
Admin	●	●	●	✗	admin	1234
Registered user	✗	✗	✗	●	ori, evia, ariel	1234
Guest	✗	✗	✗	✗	✗	✗

Many thanks to my awesome kids that helped a lot ...
